The high school library is coming into its own - slowly, it is true, but surely. Emphasis is being placed upon it in school organizations and in library conferences. This is only right and proper for it is the universal laboratory of the school and a necessary factor in our "education for freedom".

In order to get some idea of the high school library situation in our Southern schools a questionnaire was sent out in May 1926, to all schools, public and private, on the accredited list of the Association of Secondary Schools of the Southern States. This questionnaire was based on one sent out by the American Library Association two years or so ago. The questions asked were intended to bring out, in their replies, a measuring of the libraries by the requirements adopted by committees of the National Education Association and American Library Association for standard high school libraries.

Such replies, of course, cannot be considered final but they are the nearest approach we can make to the situation. So, while this report, naturally is not conclusive, it does give us an idea of the existing condi-

tions and thereby gives us a basis on which to work.

There are 756 schools represented in the Association. We received replies from 307 or more than 40% of them, a high percentage. In order to get a clear idea of the situation in each state, we analyzed the replies first by states and then summarized them.

Since school library development depends largely upon school enrollments, an analysis was made also by enrollments, dividing all schools into seven groups:

Group one	0-100
" two	100-200
" three	200-300
" four	300-400
" five	400-500
" six	500-1000
" seven	1000 and over

The analysis by states is as follows:

ALABAMA

Alabama has 53 schools on the accredited list, distributed according to enrollment as follows:

Group one	-	0-100 enrollment	-	6 schools
" two	-	100-200	"	-19 "
" three	-	200-300	"	-11 "
" four	-	300-400	"	-10 "
" five	-	400-500	"	- 0 "
" six	-	500-1000	"	- 2 "
" seven	-	1000 and over	"	- 5 "

The majority of them are in group two, 100-200. We received 20 replies from the 53 schools in the following grouping:

Group one	-	0-100 enrollment	-	2
" two	-	100-200	"	- 3
" three	-	200-300	"	- 6

(The Southern Association reports no school in group five, 400-500 enrollment).

Seventeen of these schools report separate rooms for the library

There are nine part-time or teacher-librarians giving from one hour a day to one-half of the school day. One library reports a full-time librarian and full-time assistant.

The control of the expenditures rests largely upon the principals of the schools. Nine of the libraries are open to the public as well as to the schools. It will be seen from Table I that of the 248 schools having libraries, 56 fall in the second enrollment group, 100-200, and 80 in those schools having an enrollment of over 500. There are only 13 in the fifth group, 400-500. It is in the schools having an enrollment of over 500 that libraries would be expected.

The 95 full-time librarians are in most cases in the large enrollment schools, as shown by Table II. Sixty are in group six or 500 or more enrollments, 15 in group four or the 300-400, with 4 each in group five or 400-500, and group one, and 6 each in groups two and three.

Part-time or teacher-librarians are fairly equally divided in groups 1, 2, 3, and 5, as seen by Table III, and the Student librarians mostly in the small enrollment schools as seen by Table IV.

The Southern Association requires an accredited school to have no less than 500 volumes in its library and there are very few that fall below as seen in Table VI. This table also shows that most of the schools have quite a large number of volumes beyond the required number, and practically all of the schools report very little "dead timber".

The answers to the questions on appropriations were rather indefinite but Tables VII and VIII, give some idea of the financial status of the high school libraries, with 85 receiving more than \$300 a year and only 6 receiving less than \$50 a year.

So often schools receive funds for purchasing books from outside organizations, so an effort was made to get an estimate of the amount spent on books,

and Tables IX and X give some idea though the answers were rather indefinite.

To summarize the whole, the situation in the schools in the Southern Association is somewhat like this.

There are in the 756 represented in the Southern Association 248 libraries (that is, rooms used solely as libraries). There are 95 full-time librarians, 130 part-time or teacher-librarians, 23 student librarians and 10 full-time assistants.

The minimum seating capacity of the school libraries is 8 and the maximum 250. Those having a seating capacity of over 100 are really college libraries, which are used by the academies or high schools which have some connection with them.

The libraries vary in size from 375 volumes in the smallest to ^{47,500}~~475,000~~ in the largest which is really a college library. The largest regular high school library has 8,000 volumes.

Most of the libraries are cataloged and seemingly in working order. Most of them fall under the jurisdiction of the Board of Education though not always supported by them. On this point, too, replies were somewhat confusing, as possibly the question was. There are three, however, under the Board of Library Trustees and 8 under the cooperation of the Board of Library Trustees and Board of Education. Twenty-three are under the schools themselves.

One hundred and sixty-six report appropriations of some kind. The lowest amount is \$25, the highest \$10,000.

Fewer than half of the 248 libraries lend books for home use.

Those who lent had circulations of from 25 to 24,000 during the last school year.

More than half are used as community libraries as is often the case where the high school is the community center.

In the 186 schools which report annual appropriations an average of 1.16 per pupil is appropriated as seen in Table VIII. If, as before we take for granted that the schools not replying had nothing to say we have in all the accredited schools as seen in Table VIII b, and average of .42 per pupil. This covers all expenditures supposedly. (I say supposedly because it was not made clear in the replies what this sum included).

In the 145 schools which reported the amount spent for books, we have an average of .93 per pupil, as seen in Table X a. Again if we take for granted that those not replying had nothing to say we have in all the schools in the Accredited Association an average of .21 per pupil spent for books, as seen in Table X b.

As stated before the reports on number of volumes lent for home use were rather incomplete but it will be seen from Table XIV that average number of volumes lent is 7 per pupil and 27 per day, counting 180 days to a school year. This is just for the 104 schools which reported. It would not be fair to strike an average for the entire association on this for many libraries are operated as reference libraries only.

The amount of instruction in the use of the library varies from 1 to 20 lessons and 75 schools report some instruction. Most of it is given in connection with the English Department if correlated with any subject at all.

To give the negative side.

If we take for granted that the schools that did not reply to the questionnaire had nothing to say, the situation is this. There are 508 high schools without libraries, 530 without full-time or part-time librarians and 681 receiving no instruction in the use of the library.

It is, of course, impossible to have these three things in small schools, so that the situation in the Southern Schools is more serious than if our schools were larger.

According to a report in last years Proceedings the typical high school has an enrollment of 304 and a faculty of 14. There are in the high school of this size 33 libraries, 15 full-time librarians and 19 part-time or teacher-librarians.

While this is the typical high school there are only 72 in that enrollment group, 300-400. Most of the schools have less than 200 enrollment, as seen in Table XIV.

The small enrollment of the schools makes the school library situation acute. The average school is too small to afford full-time librarian and adequate appropriation.

At the same time there are in the Association 219 schools having an enrollment of from 300 to 1000 or more. Only 126 of these have libraries and only 79 have full time librarians.

We believe it is possible to work out some recommendations by which all schools can have library service, properly proportioned to enrollment and financial support.
